HSC	Sri Krishnaswami Naidu Government Higher Secondary School, Coimbatore	93.9
SSLC	Sri Krishnaswami Naidu Government Higher Secondary School, Coimbatore	95.4

Projects Profile:

Project 6 #

Microsoft – SNOW KPI PI
Responsibilities:

- Developed a QlikView report for analyzing the performance of different TCS/NON TCS applications and to measure the contractual KPI PIs for Microsoft on period basis.

- Involved in the requirements gathering (gathering, analyzing and documenting business requirements and data specifications)

- Have utilized 3 tier architecture concepts of Qlikview.

- Developed QlikView load scripts from multiple data sources like Teradata and flat files.

- Implemented section access in such a way that Particular Service Manager could be able to view applications related to him/her only.

- Have utilized the resident and preceding loading types and have used Concatenation, join and keep operations to derive the optimized data model.

- Designed and developed extensive QlikView report using combination of charts, containers and tables and used the concept of Calculated Condition/Conditional show concepts.

- Developed different sets in charts to achieve the different selections than active one being used.

- Developed Nprinting files to export the KPI PIs excels and to attach them in the automatic mails which is used to be sent on weekly/monthly basis

Project 5 #

Shire – International BI Usage Analytics
Responsibilities:

- Have developed a single source of application where users can view all BI Qlik (Qlikview & Qliksense) applications usage statistics.

- Data and KPIs are presented in various colorful visualizations which would help business to analyze the international applications usage.

- Have used incremental logics to fetch active directory data to track the history of user addition and removal.

- Have derived a logic to show static total user count for each application for each month

- Users have been given provision to view the statistics by including IT and excluding IT.

- Have enabled self-service page in the dashboard where users can export the data in the tabular format as they want.

- Provision has been enabled to track and to find out active and inactive users in active directory which in turn will help the team to clean up AD

Project 4 #

Shire - Sales Force Effectiveness Cockpit Dashboard
Responsibilities:

- Played a role of Application Lead for all SFE applications and helped the team to understand the business behind the dashboard

- Clarifying international clients about the performance of sales reps in terms of defined 37 KPI means.

- Analyzing the complex requirements and completing the work order requests in the defined time frame.

- Extended the application in 13 different languages which help the business to use application in their local languages.

- Have taken care of tickets without SLA breaches.

Project 3 #

Takeda - Global Insights Cockpit
Responsibilities:

- Playing a role of application lead and application POC of the application and helped the business to have a better insight on international KPIs.

- On time delivery and Quick resolutions on the issues reported.

- Extended the application usage to medical users and hided the data to which they are not intended to see in the front end using Qliksense mashups.

- Involved in creation of Self-service Application so that the users can create their own visualizations in the hub.

- Implemented new Geohierarchy and Therapeutic Area updates without impacting the business logics and have given provision to view US commercial sales in the same application so as one single source of application for International and Global markets.

- Provision has been given to the users to view sales in Japanese Yen as well as in global currency in the front end mashups.

Project 2 #

JPMC – CB Travel and Expense Report
Responsibilities:

- Dashboard has been developed with complex business requirements and flexible way of enabling different visualizations for different LOBs in the same dashboard

- User are given the ability to extract the expense reports with columns and measures of their interest.

- Complex section access has been implemented to enable the users to access LOBs other than their own LOBs and other cost centres.

- Users are given with ability of viewing their team expenses with Financial and Managerial views.

- Co ordinated with vendor team and admin teams to ensure dashboard data quality is not compromised for any reasons.

- Have automated the data sources deployments in production in order to reduce the dependency with DVSS Admin team.

Project 1 #

JPMC – CDM Dashboard
Responsibilities:

- Dashboard has been migrated from Qlikview to Qliksense with extended business requirements.

- Coordinated with DB teams during the phase of data migration from SharePoint to EDH and worked on data validation.

Achievements #

- Innovated a tool named '**File Scanner'** to retrieve the production QVWs names which are using specified view name/QVD in their script part and to reduce manual effort involved in impact analysis on the changes.
- Developed an application called '**SFE and Insights User Access Dashboard'** to view users who are having what level of access and to find out inactive user who do not have to access the dashboard but added in the AD group and to identify the users who are having access to Salesforce but not to dashboard
- Developed a tool '**DVSS Deployment tracker**' in order to reduce the dependency with admin and to run BAU process smoothly.

Appreciations:

- Appreciation received from onsite manager for the involvement and dedication towards application stabilization in production environment and I am rewarded with gift voucher for the same.
- Awarded **Star performer** of the project (Shire GPTW award).
- Received an award '**Innovative Hero of Life Science Portfolio**' for the automations done.
- Received an **ACE (Accenture Celebrates Excellence) Team award** for the excellent client delivery /Zero escalations in the international applications.
